

**TAPAKNUSA** Fresh banana leaves from Indonesia

# Fresh Banana Leaves Export Catalogue

Sorted to physical specification · Vacuum-packed · Shipped with phytosanitary certificate,  
Certificate of Origin and lot-traceable documents.

# 1 · Product & specification

One verified export line today: fresh banana leaves (daun pisang) from smallholder food gardens across Java. We grade by physical specification, not marketing labels.

| Parameter              | Export grade                                                                                                                 | Grade B             |
|------------------------|------------------------------------------------------------------------------------------------------------------------------|---------------------|
| Length per leaf        | ≥ 100 cm                                                                                                                     | 60–100 cm           |
| Tears / holes          | none visible                                                                                                                 | ≤ 1 small edge tear |
| Condition              | fresh full green, mature                                                                                                     | fresh green         |
| Washing                | washed, free of spots/dust                                                                                                   | washed              |
| Packing                | vacuum-sealed 1–2 kg packs, ventilated food-grade cartons                                                                    |                     |
| Varieties              | Batu/Klutuk, Tanduk, Kepok — by season, stated per lot                                                                       |                     |
| Documents per shipment | phytosanitary certificate (Badan Karantina Indonesia), Certificate of Origin, invoice & packing list with matching lot codes |                     |

- MOQ trial ±100 kg LCL
- Sample courier ≤30 kg
- Quote in 1 working day

## 2 · From garden to carton

**Sort.** Leaves are graded at the handling point: length, tears, cleanliness — everything written on the spec sheet, nothing invented.

**Vacuum.** Washed leaves are folded and vacuum-sealed in 1–2 kg packs, then boxed in ventilated cartons. Vacuum (not freezing) keeps structure and aroma on 3–7 day lanes to Singapore and Malaysia.

**Trace.** Every carton carries lot codes tying it back to farm origin and pack date. Your surveyor is welcome at loading.

### 3 · Markets & the trial path

**Focus markets.** Singapore and West Malaysia first (3–7 day lanes); Japan and UAE as verified next steps. For Singapore, banana leaves enter as a plant product — the NParks plant import permit per consignment applies; we prepare all export documents to match.

**Low-risk start.** Step 1: send dish, pack preference, volume band. Step 2: courier sample  $\leq 30$  kg door-to-door, product free, courier at cost, credited to your first PO. Step 3: your kitchen tests it. Step 4: LCL trial  $\pm 100$  kg with the full document set.
